PATCH NOTE – EIME V6.3.6

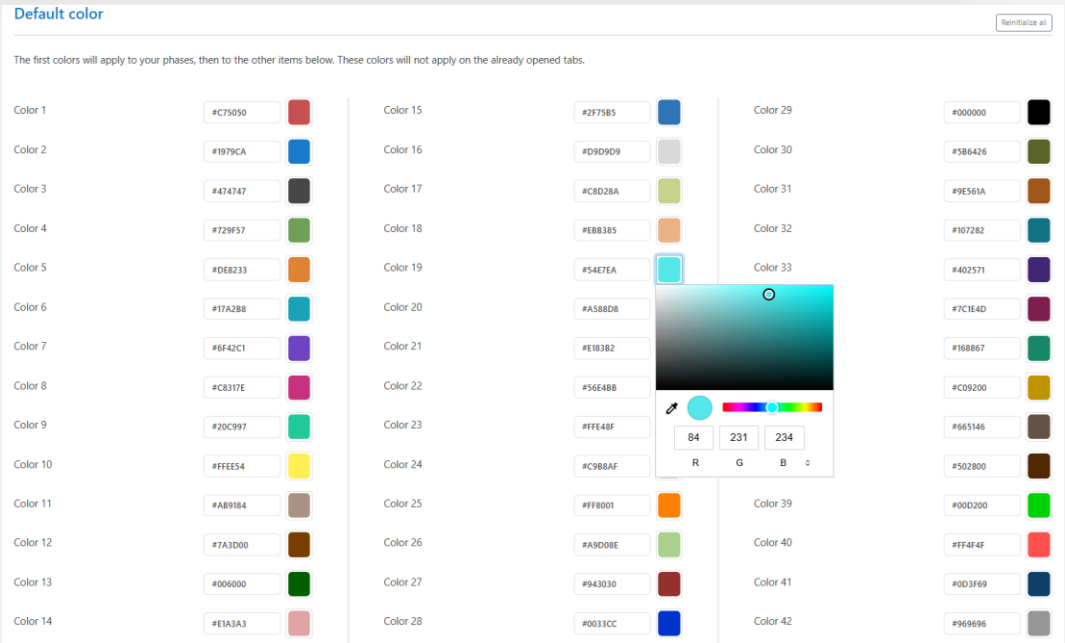

November 2026

New features

- Added the ability to set default colors for charts. Customize EIME charts to match your company's brand guidelines with this new feature !
- Expanded scope of the dataset substitution feature: You can now perform substitutions on multiple case studies simultaneously from the project interface.

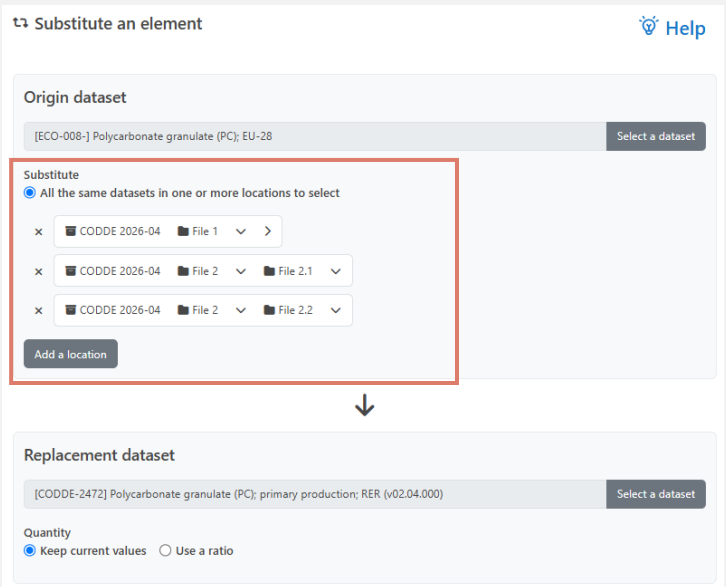

Default Color Settings for Charts

Accessible from User Preferences

Substitution Across Multiple Case Studies

From the project interface, right-click on a folder or case study (multiple selections are allowed). Then select "Substitute."

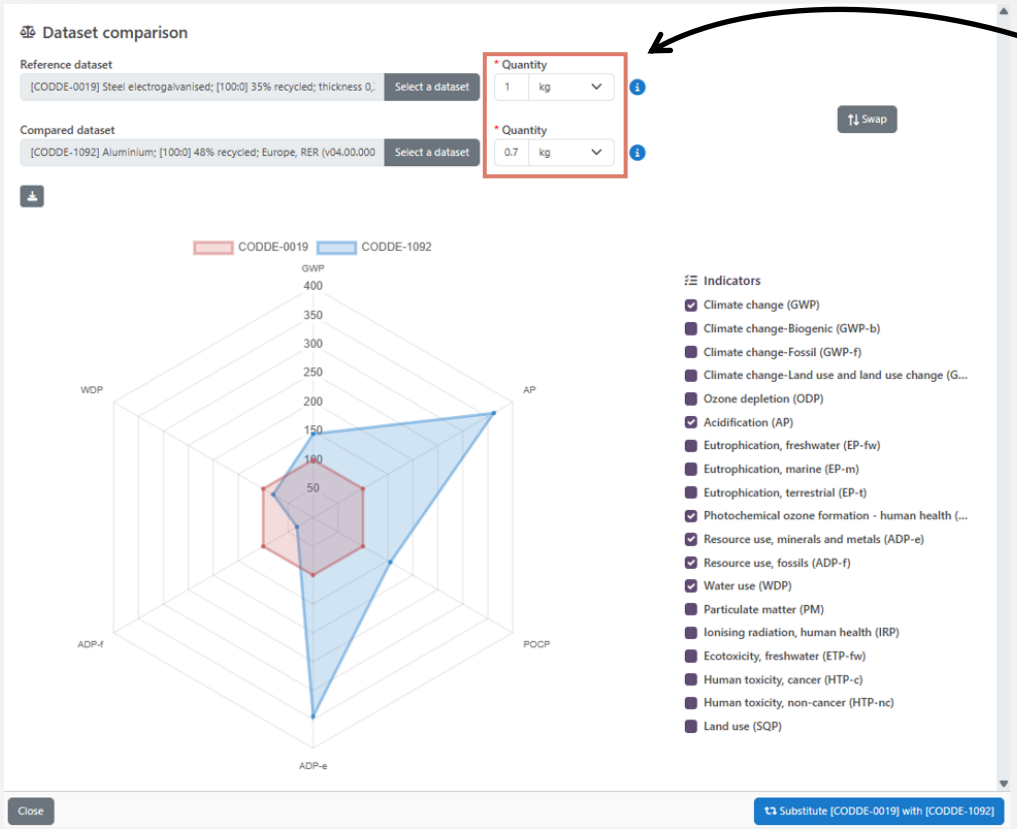

PATCH NOTE – EIME V6.3.6

November 2026

Improvements

- It is now possible to open the editing windows for datasets and containers when using the read-only feature of a case study.
- Automatically create folders in the Design Interface library to organize case studies that have been converted into systems. The folder name corresponds to the name of the top-level folder in which the case study is stored in the Project Interface.
- Improvements to the dataset comparison feature :
  - Option to add ratios and change the unit of the data being compared
  - Option to perform a substitution in the model (replacing the original data with the compared data)

Adding a ratio and changing the unit

Button to replace the original data with the compared data

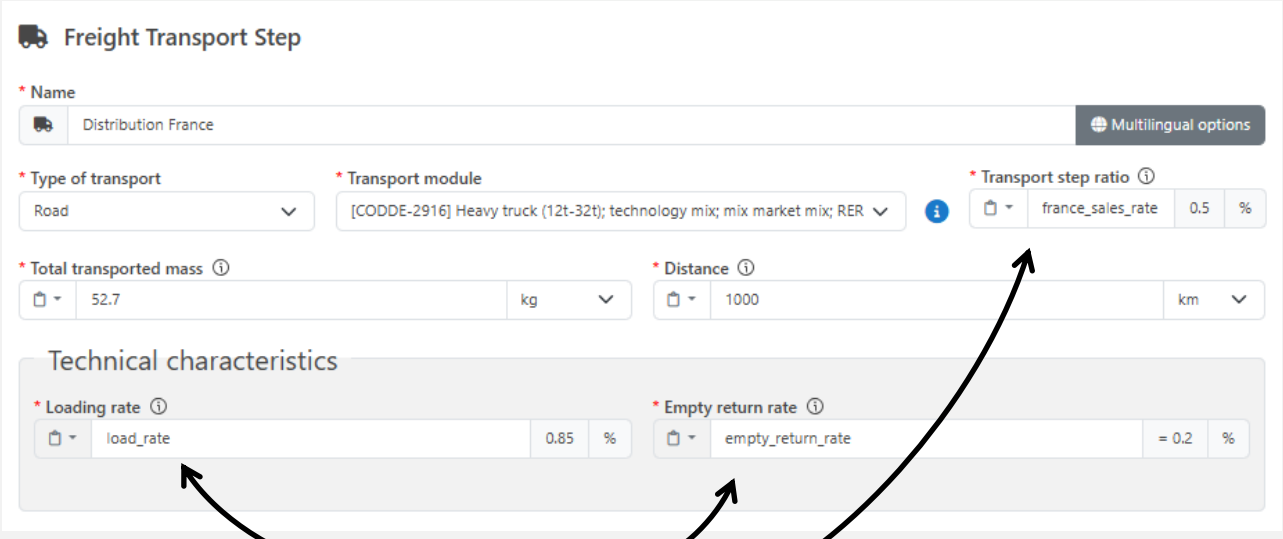

Improvements to Dataset Comparison

PATCH NOTE – EIME V6.3.6

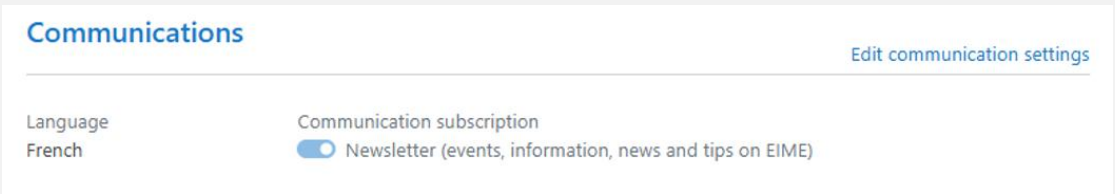

November 2026

Improvements (following)

- Added the ability to enter formulas in multiple quantity fields of the transport step form (ratio, load factor, and empty return rate). This allows you to use case study parameters in these fields.
- Added keyboard shortcuts to navigate between pages while searching the library: Shift + Alt + → and Shift + Alt + ←. As a reminder, you can view a list of all EIME keyboard shortcuts by clicking the button in the top banner.
- In the user preferences, an option has been added to set the language for email communications, as well as an option to unsubscribe from the newsletter.
- In the form for entering case study parameters, the first row and column of the table are now pinned to improve usability.

Parameters in the transport step form

(available from the " ⚙ Settings" menu)

PATCH NOTE – EIME V6.3.6

November 2026

Bug fixes

- Fixed an issue where the number of significant digits displayed in the design indicator results was too high.
- Fixes and improvements to several aspects of the parameters, including :
  - Automatic save after each entry in the form,
  - Fixed a bug that occurred when too many parameters and scenarios were created,
  - Improvements to error messages when importing Excel files.
- In the analysis contribution tables, opening a level of the architecture no longer moves it to the top of the list when a large number of elements are expanded.
- Fixed a display bug in the charts that caused the chart to flicker when the application was zoomed in.
- Fixed a bug related to the orientation of the resize arrow in the dataset library within the design interface.
- Fixed a bug in the project interface's user filter that prevented projects in which the user has case studies from being displayed.
- In Dynamic Projects, fixed an issue where dragging and dropping datasets from the library wasn't working.
- Other minor bugs.
